

## On the Subject of Organization

*Order! Order! Order!*

This module has a notebook themed display which shows a module's name.

To solve this module the defuser must solve every single module on the bomb in a certain order dictated by this module. The module on the notebook display is the next one to be solved, and it will update to show the next module after each solve. In the case of multiple Organizations any module on any Organization's notebook display can be solved without penalty. A list of other modules that Organization CAN ignore (i.e. they don't show up ever in an Organization's order and can be solved on their own time without penalty) called **Ignored Modules** is on Page 2. Another list on Page 3 called **Moved To Back** shows all modules Organization CAN move to the back of its order (mainly because they can take a while). The reason I mention the word CAN is because both of these lists have mod settings which you may change at your leisure if you do not want these lists in play (both lists are active by default).

A strike will be recorded if any module is solved that is not on an Organization's display. If this does happen, that module will be removed from being a future possibility.

**Ignored Modules (Always)**

### Time Mode Cooldown

This is a feature of Organization which activates only if it is enabled and the bomb is in Time Mode. Basically, because there is a lower amount of time to start, and solves are slower with how Organization works normally, this feature exists. The feature itself is a 30-45 second cooldown between displayed modules. During this cooldown period ANY module may be solved and Organization WILL NOT hand out a strike like it normally does. This gives the defuser and expert some time to bring up the time mode time before they get to the harder modules. With multiple Organization's this feature gets interesting. If one Organization goes into cooldown while another still displays a module the one displayed by the other Organization STILL has to be solved. It is only if ALL Organizations are in cooldown that the defuser and expert can safely solve any module without problems.

\*NOTE\* When the cooldown reaches 10 seconds the time left on the cooldown will be displayed on the module to prevent solves close to when the next module will appear.
